-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3,5,6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lu et al 6,517,127 in view of Zagoroff 4,559,795.

Lu et al teach all of the elements of the claimed electric lock except for the claimed resilient actuating member. Lu et al teaches an actuating member 6 having a well known slip-clutch connection with the gear plate 8 through a spring bias 92 and ball protrusion 91/recess 93 slip connection. Zagoroff teaches a slip clutch connection between two elements 10/18 wherein the first element is rigid but the second element 18 is resilient, thereby eliminating the need for a separate bias element. It would have been obvious to one of ordinary skill in the art to modify the slip-clutch of Lu et al by substituting the connection of Zagoroff, thereby combining the function of the actuating plate and spring bias by employing a resilient inherently biased actuating plate in order to streamline production of the lock assembly.

***Allowable Subject Matter***

3. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art fails to teach a resilient actuating member, as claimed, having resilient connecting portion including a plurality of angularly spaced apart ribs to connect the securing portion to the abutting portion.

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note the yieldable clutch connections of Jacobi '695, Berger et al '744, Myers '874, Kalias '434, Hawkins '080, Schnepel '628, Huang '865, Foshee '240, Fan '697, Park '280, Dumont '162, Ward '824, Yang '420, especially.
